

Arcade — logo specification

Implementation reference for the Lenni identity. Covers mark geometry, lockups, clear space, minimum sizes, colour pairings, favicon and app icon output, in-product placement and misuse.

All geometry in this document is authoritative. Where a value here disagrees with an exported asset, the value here wins and the asset should be re-cut.

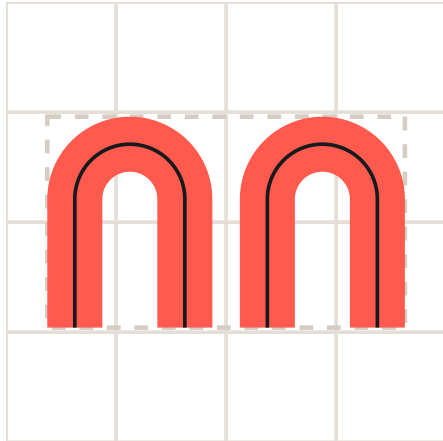

1. The idea

The double n is the only repeated form in the name. Drawn as two identical arches standing side by side, it becomes a mark about parts fitting together — modular, repeatable, structural — without illustrating software. The i-dot in the wordmark carries the same coral, so the symbol and the word read as one system rather than a logo with a badge attached.

2. Symbol geometry

The symbol is drawn on a 48×48 grid. Two open arches, identical, standing 3 units apart — half a stroke width of daylight between them, enough that the pair never closes up into an m. Stroke is centred on the path, 6 units wide, butt caps, no joins to round. Butt caps mean the stems stop dead at their endpoint, so the true optical box is 39×23 — measure it from the drawn edges, not from the path. It is centred on the grid at 24, 24, leaving 4.5 units clear left and right and 12.5 above and below. That surround is part of the drawing, not padding.

Grid 48 × 48

Optical box 39 × 23

Stroke width 6

Arch radius 6

Gap between arches 3

Stem height 14

Caps / joins butt / miter

CANONICAL SYMBOL SOURCE

```
<svg viewBox="0 0 48 48" fill="none" xmlns="http://www.w3.org/2000/svg">
  <g stroke="currentColor" stroke-width="6">
    <path d="M7.5 35.5 V21.5 A6 6 0 0 1 19.5 21.5 V35.5"/>
    <path d="M28.5 35.5 V21.5 A6 6 0 0 1 40.5 21.5 V35.5"/>
  </g>
</svg>
```

Ship it with `stroke="currentColor"` so a single file serves every colour treatment. For favicon and app-icon output, convert strokes to outlines first — stroke scaling is unreliable in some rasterisers.

3. Wordmark

Satoshi Bold (700), lowercase, tracking -0.04em , optical alignment on the baseline. The *i* is a custom glyph: the tittle is redrawn as a true circle in coral, sitting one stroke-width clear of the stem. Because of that substitution the wordmark ships as outlined vector artwork — never as live text with a webfont.

The logo for 'lenni' is displayed in a large, lowercase, sans-serif font. The letter 'i' has a red dot above it.

Typeface	Satoshi Bold 700
----------	------------------

Case	Lowercase, always
------	-------------------

Tracking	-0.04em
----------	---------

Titlle diameter	1.83 × stem width
-----------------	-------------------

Titlle colour	coral-500 only
---------------	----------------

The name is set **lenni** in the logo and **Lenni** in running copy. Never capitalise the wordmark and never letterspace it open.

4. Lockups

Three approved arrangements. The horizontal lockup is the default and should be used unless the space genuinely doesn't allow it.

The horizontal lockup shows the red arch symbol followed by the word 'lenni' in black lowercase letters.

Horizontal

Default. Arch feet sit on the wordmark baseline; symbol height = cap height.

The stacked lockup shows the red arch symbol above the word 'lenni' in black lowercase letters.

Stacked

Narrow or centred contexts.
Gap = one stroke width.

The symbol only lockup shows the red arch symbol by itself.

Symbol only

App icon, favicon, avatar, collapsed sidebar.

In the horizontal lockup the arches stand on the wordmark's baseline — they are never optically centred against it. Symbol height equals the wordmark cap height (0.72 em), and the gap between symbol and wordmark equals 1.75 stroke widths at matched scale — $\text{gap} = 1.75 \times \text{stroke} \times (\text{symbol width} \div 39)$.

5. Clear space and minimum sizes

Clear space on all four sides equals the arch radius r — 6 units on the 48-unit grid, twice the gap between the arches. Nothing enters that zone: no type, no rules, no container edge, no other logo.

Symbol, digital	16 px
Symbol, print	6 mm
Horizontal lockup	96 px wide
Stacked lockup	64 px wide
Clear space	r on all sides

Below 20 px the 6-unit stroke thickens to 7 units so the arches hold their weight against the counter. Two cuts of the symbol therefore exist: `lenni-mark.svg` (crop 4.5 12.5 39 23) and `lenni-mark-small.svg` (crop 4 12 40 24 — the heavier stroke reaches half a unit further on every side). There is no third cut.

6. Colour

The symbol is coral-500. The wordmark is ink, with the tittle in coral-500. These are the only approved pairings — the logo is never tinted, gradient-filled or given an outline.

Primary
coral-500 on canvas

On ink
coral-500 unchanged

On coral
white knockout

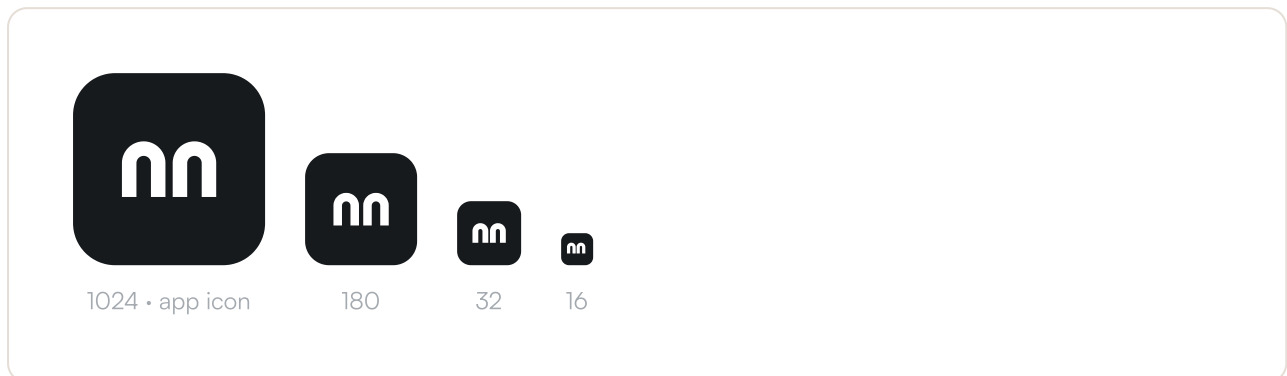

Mono
Single-colour print, engraving

TOKEN	HEX	VALUE	USE
coral-500	#FF5A4D	255 90 77	Symbol, tittle
ink	#171A1D	23 26 29	Wordmark letters
white	#FFFFFF	255 255 255	Knockout on coral or ink

Coral-500 is the brand mark colour only. Primary action fills stay on coral-700 (#D83A2F) for contrast — the logo is not a control and does not follow button colour.

7. App icon and favicon

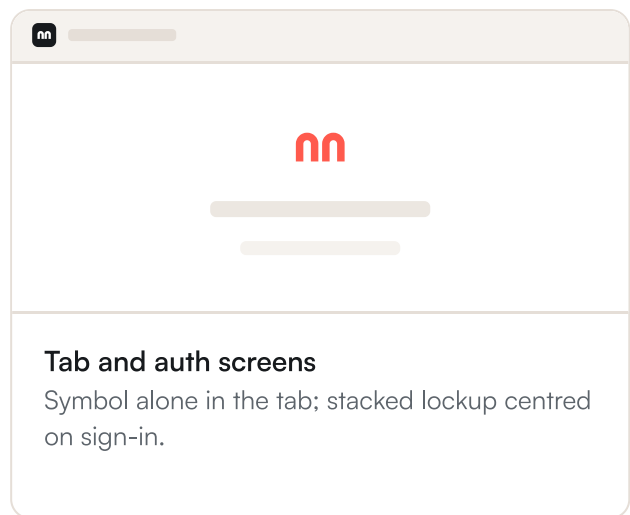

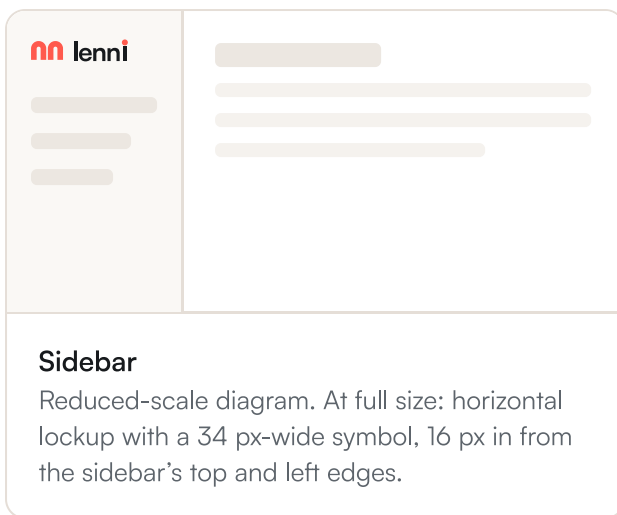

The icon container is ink with a white symbol. Coral is reserved for the on-light lockup, so the tile stays legible against both light and dark OS wallpapers and doesn't compete with the coral used inside the product.

FILE	SIZE	NOTES
favicon.svg	vector	Small cut, 7-unit stroke
favicon.ico	16, 32, 48	Ink tile, white symbol
apple-touch-icon.png	180	Square, no radius — iOS masks it
icon-maskable.png	512	Symbol inside the 80% safe zone
og-image.png	1200 × 630	Horizontal lockup on canvas

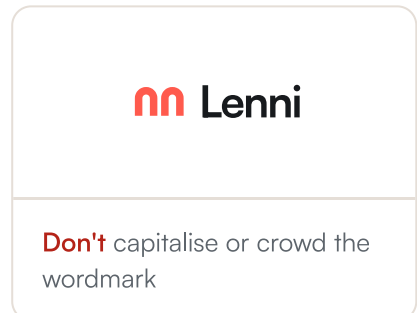

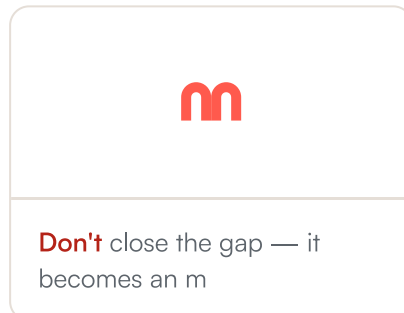

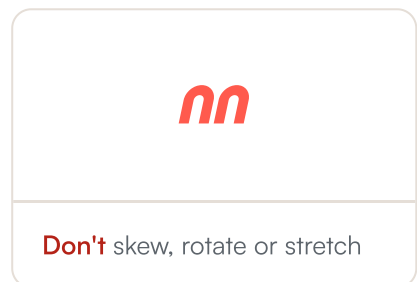

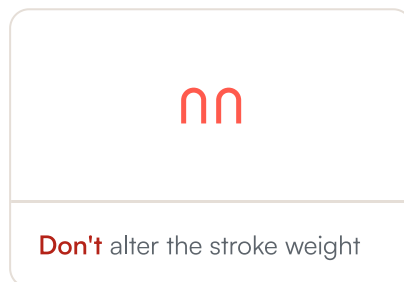

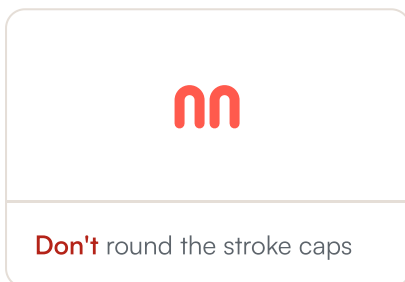

8. In-product placement

The logo appears once per screen at most. Inside the workspace it lives at the top of the 248 px sidebar; it does not repeat in page headers, empty states or dialogs.

9. Misuse

Each of these has been seen in the wild on comparable identities. None is permitted.

10. Handover checklist

What ships with this spec, and what is still outstanding.

Assets to produce

- lenni-mark.svg —
outlined, currentColor
- lenni-mark-small.svg — 7-unit stroke
- lenni-lockup-horizontal.svg
- lenni-lockup-stacked.svg
- lenni-lockup-mono.svg
- Favicon and app-icon set (section 7)

Outstanding decisions

- Wordmark letterforms are Satoshi as drawn — a bespoke cut of the l, n and i is the next refinement
- Animated form of the mark for loading states, if wanted
- Trademark search on the symbol before it goes to registration
